Half Day Inset outline

3 hour practical training session

Outdoor Learning for Foundation Subjects

Build staff confidence in delivering engaging science and geography lessons outdoors.

During this practical session, your staff will explore:

- Identify and overcome common barriers to outdoor learning within your school
- Experience practical outdoor science activities suitable across the primary age range
- Explore engaging geography activities that make the most of your outdoor environment
- Establish behaviour-for-learning using boundary games
- Understand the research behind outdoor learning and its impact on engagement, inclusion, behaviour and attainment
- Discover active retrieval strategies to support knowledge recall across the curriculum
- Experience practical PSHE activities that encourage teamwork and communication
- Apply their learning by designing their own outdoor science lesson and receive personalised feedback to support implementation

Putting Learning into Practice

Every participant will finish the session by planning their own outdoor lesson using the ideas explored during the training. We'll provide individual feedback and practical suggestions to help staff leave feeling confident to deliver their first outdoor lesson back at school.
